

Action 2: Propose a EU copyright and data legislative and regulatory framework fit for research	
<i>Contact point: Alea Lopez de San Roman, DG R&I.A4</i>	
1. Description	<p>A legislative and regulatory framework fit for research should enable, among other things, the seamless:</p> <ul style="list-style-type: none"> • access to (including open access) and reuse of publicly funded R&I results ; • access to (including open access) and reuse of publications and data for research purposes; • data services and infrastructures managed by/for the benefit of research stakeholders; and • flow of research knowledge and data across the EU based on Article 179 TFEU and academic freedom. <p>However, barriers and challenges to these objectives exist in the EU legislative and regulatory framework. To address this situation, the Commission will analyse EU copyright and data legislation to identify existing and possible additional barriers and challenges, and possible measures to address them. The results of the analysis will be discussed with MS/AC and relevant stakeholders.</p> <p>With regard to copyright and related rights, the analysis will examine whether the relevant EU Copyright legislation (e.g. Information Society Directive, Copyright Directive) fosters and/or deters access and reuse of scientific publications and will examine some of the legal barriers encountered by researchers and institutions to provide open access to them (e.g. due to copyright and licensing conditions in publishing agreements). The analysis will also look at specific initiatives to enable open access to scientific publications, including amendments introduced by several MS into their national copyright legislation enacting a secondary publication right for publicly-funded scientific publications and non-legislative initiatives (such as those developed by research funders (e.g. cOAlition S Rights Retention Strategy) and research institutions (e.g. Harvard model)). Beyond scientific publications, the analysis will also explore whether the EU Copyright legislative framework fosters and/or deters access to (including open access) and reuse of data for scientific purposes. It will also examine relevant copyright and licensing initiatives that seek to foster access to and reuse of publicly funded research data.</p> <p>With regard to data legislation, the analysis will explore how existing legal instruments (e.g. Open Data Directive) and upcoming data legislation (e.g. Data Governance Act, Data Act, Digital Services Act) (may) impact research and research stakeholders' operations (e.g. access to data, research data sharing and reuse, impact on research performing organisations, research funding organisations, and research infrastructures/services).</p> <p>On the basis of the copyright and data legislation analysis, the action will explore possible legislative and non-legislative measures to ensure a framework fit for research.</p> <p>This action will interact with ongoing actions such as the monitoring and</p>
